AI news

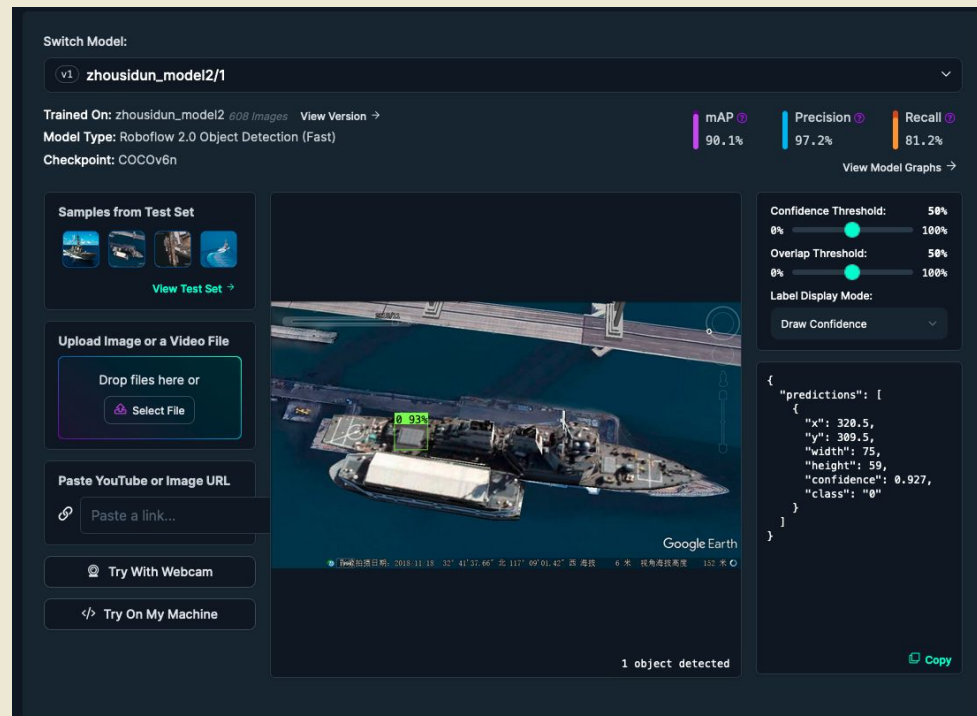

AI News

- China's military dataset
- llm.c
- DeepSeek makes the best coding model in its class
- ChatGPT Native App
- GPT-4o

China's military dataset

- UC Berkeley researchers have found a Chinese dataset named 'Zhousidun' (translation: 'Zeus's Shield').
- consists of "608 oblique and satellite images of
 - American Arleigh Burke-class destroyers
 - other allied destroyers and frigates"
 - bounding boxes drawn around "the ships' radar systems

llm.c

- Andrej Karpathy (ex Stanford / TESLA / OpenAI)
 - > Let's reproduce the **GPT-2** (124M) in llm.c (~**4,000 lines of C/CUDA**) in **90 minutes** for **\$20**.
 - > Single 8X A100 80GB GPU box, the **GPT-2 1558M** model would take ~**1 week** and cost ~**\$2.5K**
- No PyTorch

DeepSeek

- Demo
